

IOC Container --> Beans

2 ways :

1. Annotation based
2. XML Configuration based

Reflection

IOC Container

Types of dependency Injection :

1. Constructor Injection
2. Setter Injection
3. Field Injection

Why Constructor Injection is Recommended ?

- > Dependency get wired at the time of object creation
- > final can be used.
- > Easy to test the class

Steps for ApplicationContext (IOC Container) :

step 1 : Spring Start the container

step 2: Spring reads AppConfig.java

step 3: Spring processes @ComponentScan.

step 4: Spring finds @Component classes.

Step 5: Spring creates Bean definitions

PaymentService

Bean name : paymentService

Bean class

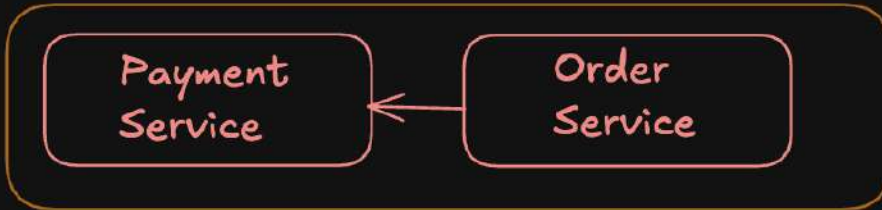

Scope :

Dependency : no

Bean Definition

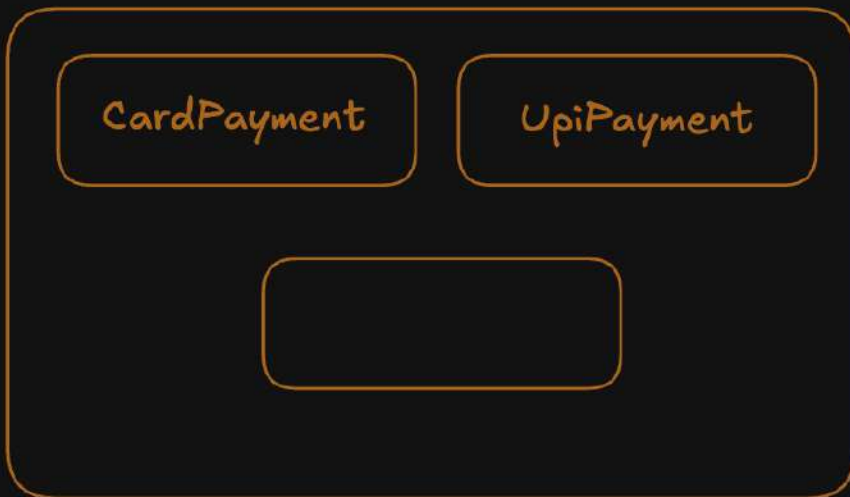

Step 6: Spring starts creating objects.

```
PaymentService payment = new PaymentService();
```

```
OrderService order = new OrderService(payment);
```

Step 7 : Our application uses these beans

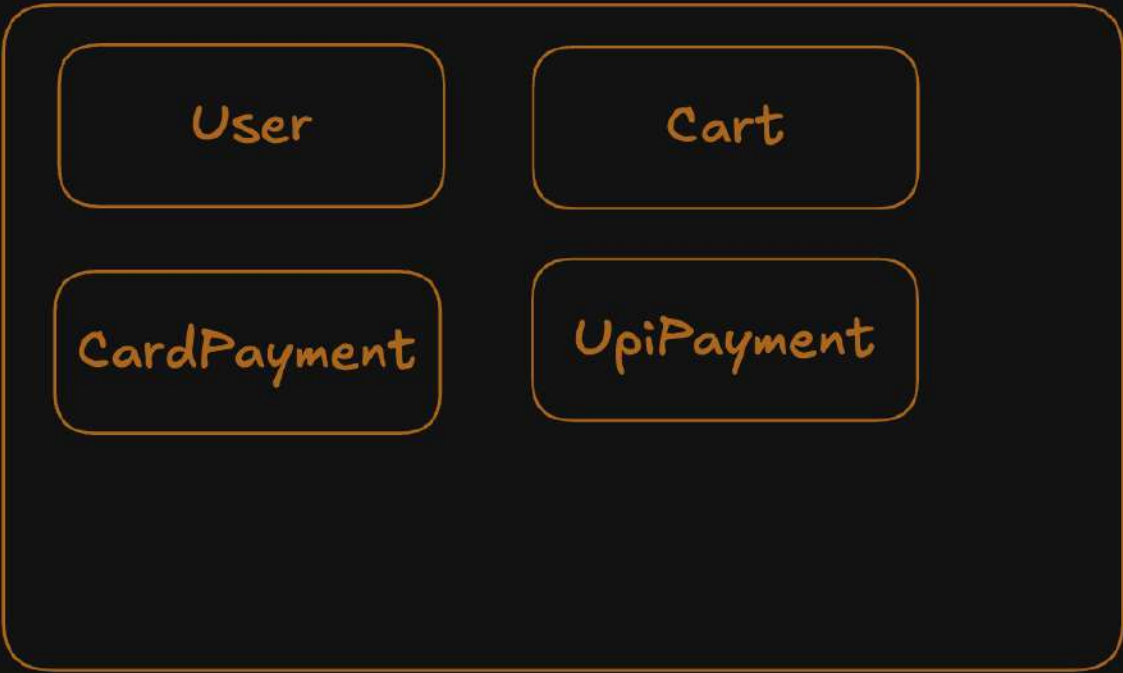

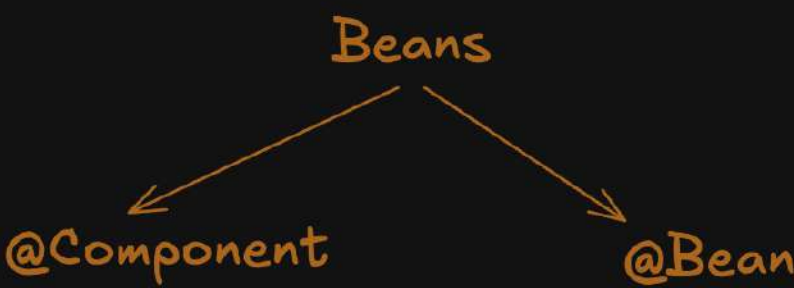

```
OrderService order = new OrderService();
```

@Primary

@Qualifier

IOC Container

```
OrderService order = new OrderService();
```
